## Overview

Since 1981, **Pipp Mobile Storage System's** mission has been to design space-saving systems that are responsive to customer-specific storage needs; to manufacture our systems to the highest quality standards; and to provide a level of sales and service support that is unsurpassed in the storage products industry. That mission is ongoing. Our extensive product line allows us to tailor systems for many different storage situations, and we have the manufacturing capacity to handle high volume requirements. We currently ship mobile shelving for retail backrooms to nearly 4,000 locations a year. In addition, we take pride in our reputation for responding quickly and effectively to unexpected job-site challenges. Our sole focus is on ways to help our customers use storage space wisely.

## Creating Space

**Pipp Mobile Storage Systems** creates more space by compacting storage and eliminating fixed aisles. This, in turn, creates a single aisle system that increases storage capacity by as much as 80%.

## Creating Solutions

**Manual Mobile System** is available in standard and heavy duty. The Standard Manual System is used primarily in retail applications such as shoes, apparel and handbags. The Heavy Duty Manual System is used in similar applications. However, as materials become denser in weight, such as, cosmetics, home furnishings or “knock down” furniture, the heavy duty manual system is the product of choice. The maximum system length is 12’ with an overall weight capacity of 3,000 lbs. per carriage.

### Shelving Options:

- ||||| Rivet Style
- ||||| Steel Clip Style
- ||||| 4 Post L&T Style
- ||||| Light or Heavy Duty Pallet Rack  
*(applicable only on heavy duty manual system)*

**Mechanical Assist System** is applicable when carriage weights exceed 3,000 lbs. The drive shaft allows movement of the entire carriage with just a turn of the handle. The shaft runs the entire length of the carriage therefore eliminating “lag time” and “sway”. The maximum system length is 24’ with an overall weight capacity of 800 lbs. per linear foot of carriage.
