RoomScape® Furniture

General Information

SPECIFICATIONS

Bed

The bed is composed of: 1) bed frame ends, 2) caps, glides and stacking devices, 3) bed deck assembly, 4) lower horizontal reinforcing member (lofting applications only). See dimensions page for combination of components and dimensions.

Bed Frame Ends

Bed frame ends are fabricated of two heavy 14-gauge steel tubular uprights. A vertical slotted pattern on 1" centers is located on the front and back of each to accept and provide height adjustment of bed deck and hang-on components. Two 14-gauge uprights are joined by three horizontal 1-1/4" round steel tubes which are welded to the tubular uprights to create a ladder effect. Electrostatically applied epoxy powder finish is applied for maximum durability.

Top Caps, Base Glides and Stacking Devices

Caps and glides are black molded nylon for maximum strength and are inserted into the ends of the vertical tubes of the bed frame ends. They utilize a friction fit so as to eliminate accidental dislodgement yet be capable of removal or installation when lofting or de-lofting beds.

Stacking devices are molded of black glass-reinforced nylon for maximum torsional strength. They insert with friction fit into top and bottom of the bed frame ends to provide structural joinery for bunked or lofted beds.

Bed Deck Assembly

The deck frame assembly is composed of two 11-gauge steel rails with a series of hooks on each end that fasten into the vertical slots of the bed frame end. They are height adjustable from top to bottom anywhere along the vertical slot pattern of the upright. A side rail of 5/8" thick, 45-lb. density particleboard with .030 high-pressure laminate face, .028 backer sheet and 3mm PVC edge band is attached to the outside surface of the steel bed rails for a finished appearance. Four 16-gauge formed steel deck stringers drop into belt loop style embosses that are equally spaced on the bed rails. These deck stringers span between the two rails and support the solid bed deck. Electrostatically applied epoxy powder is applied for maximum durability.

The bed deck is composed of three 3/4" thick 45-lb. density particleboard deck boards which have white melamine top and bottom surface to resist stains and to provide a light, finished appearance to the underside. They are edged banded with white PVC. The deck boards lay in from above on top of the steel deck stringers and are captured at the ends of the bed to prevent sliding. The deck boards are 36-1/4W x 26-3/8"L and are universal end-to-end and top-to-bottom.

Sleeping Surfaces

Sleeping surface (or mattress size) shall be: 36" x 80".

Lower Reinforcing Member

The lower reinforcing member is positioned at the lower back side of a loft bed assembly to provide structural integrity. It is a 1" thick x 7-9/16"H x 80"L fabricated box section comprised of 18-gauge and 11-gauge steel with a series of hooks on each end for attachment to the bed frame ends. It is not required for single or bunk bed configurations. It is coated with electrostatically applied epoxy powder for maximum durability.

Hang-on Worksurfaces

Worksurfaces are constructed of 45-lb. high-density particleboard laminated with .030 face sheet and .028 backer sheet of high-pressure laminate. 3mm PVC edges provide optimal durability.

Worksurfaces are supported by two 14-gauge drawn steel cantilever brackets which hook into the slotted channels of the bed uprights. This provides height adjustability to suit the comfort of the student. Brackets are designed to prevent accidental dislodgement. A 1-1/8"H x 2-1/8"W cutout is located in the upper rear corner of each bracket to allow cables from the worksurface to drop over the edge and pass through the bracket.

PowerUp® option provides two grounded power outlets and voice and data terminal connections locations. Standard with 9" grounded cord. One PowerUp® module centered left to right at the rear of the surface.

Hang-on Tackboards

The tackboard is constructed of fabric upholstered 3/4" thick industrial grade micore. It is attached to an 11-gauge powder-coated steel back which incorporates hooks for hanging on the bed frame end.

Hang-on Megasurface

Megasurfaces are constructed the same as regular hang-on worksurfaces but are composed of two 15" x 37" x 40" x 18" corner surfaces to provide maximum worksurface ideal for computers. The surfaces span the full length under the loft and have a concave edge on the user side creating a wrap around effect. A full-length tackboard 80"L x 16"H is included providing tackable space and worksurface support.

PowerUp® option provides two grounded power outlets and voice and data terminal connections locations. Standard with 9" grounded cord. Two PowerUp® modules provided, one in each rear corner

Hang-on Shelf Unit

End panels of the shelf are particleboard covered by .030 high-pressure laminate with the edge banded by matching 3mm PVC

edge banding. The steel bottom shelf is 16-gauge steel, powder-coated paint. The steel back is 11-gauge and incorporates hooks to hang the shell at the desired height from the bed frame. Hook design prevents accidental dislodging.

Hang-on Flipper Door Unit

The construction of the end panels and steel shelves of the flipper door unit are identical to the shelf. The door opens on top of the unit. Construction of the laminate flipper door front is .030 high-pressure laminate covering the particleboard inner structure. The outer edges of the flipper door are matching 3mm PVC edge banding. Painted components are electrostatically applied epoxy powder coated. Locking is optional.

Task Light

UL Listed task light attaches to the flange on the underside of shelf or flipper door cabinet. Includes a 15 watt cool white lamp and 8" cord manager attaches to slotted channel in bed frame and manages cables above or below worksurface. Black only.

Hang-on Clothes Rack

Constructed same as hang-on shelf but includes chrome plated clothes bar below the steel shelf.

Mobile and Freestanding Pedestal

One piece 20-gauge steel shell with enclosed 20-gauge top. 22-gauge, 3-piece welded drawers with multiple offsets providing maximum strength and moisture resistance. Heavy-duty steel ball-bearing drawer suspensions. Lock options: no lock, "Top drawer only" lock which provides security to the top drawer via user supplied padlock, or double bitted/removable core key lock (on steel front units only). Freestanding units supplied with counterbalance weight. Mobile units have caster located in bottom of lower drawer front to prevent forward tipping. Painted with high-quality baking enamel. Four heavy-duty casters (2 locking) provide mobility for mobile pedestals.

Steel front pedestals have 20-gauge, double wall fronts with integral drawer pull. Front painted to match the pedestal shell.

Pedestals with woodgrain laminate front & top have 3/4" thick fronts and top constructed of particleboard core with high-pressure laminate surface. Edges of top, and drawer front sides are banded with matching 3mm PVC for added durability. Bottom and top edges of drawer fronts are banded with matching 1mm PVC for a tight, clean fit between drawers. Drawer pull is 8"W, 16-gauge steel, waterfall design painted to match the pedestal shell. Grain direction on top is side-to-side, on drawer fronts is vertical.

Hang-on Drawer Unit

Construction is same as hang-on flipper

door unit except two drawer fronts are attached to powder-coated steel drawer bodies. Drawer operates on heavy-duty multi-stage steel ball-bearing suspension. Double bitted removable core lock.

Freestanding Wardrobe Unit

Shell is constructed of 20-gauge steel. Uprights and top and bottom reinforcements are welded into a rigid "box frame." Two 18-gauge reinforcements located along the bottom front and back of cabinet house four threaded weldnuts to accept adjustable leveling glides. 18-gauge top reinforcement. Lock options: no-lock, "Top Drawer only" lock which provides security to the top. Drawer of combination wardrobes via user supplied padlock, or double bitted/removable core key lock. Drawers are 20-gauge steel with slotted bottoms for ventilation. Heavy-duty steel ball-bearing drawer suspensions. Painted with high-quality baking enamel.

Steel fronts units have 20-gauge drawer fronts and doors (double wall) with integral pulls. Fronts painted to match the wardrobe shell.

Wardrobes with woodgrain laminate front have 3/4" thick doors and drawer fronts constructed of particleboard core with high-pressure laminate surface. All horizontal edges are banded with matching 1mm PVC for a tight clean fit, with all vertical edges banded with matching 3mm PVC for added durability. Drawer pull is 8"W, 16-gauge steel, waterfall design painted to match the wardrobe shell. Door pulls are located at top of doors and are same design as on drawer but with half located on each door. Grain direction is vertical.

Stack-on Wardrobe

Construction of case and doors is same as wardrobe unit. This unit is intended to stack on top of wardrobe unit to provide additional storage and is reversible to face forward or backward. Power cord exits are located on each side. Thumb screw attachment method provides easy yet positive attachment to top of wardrobe unit. Locking is optional. Painted with high-quality baking enamel. Door pull on woodgrain laminate door is at bottom and inverted.

Freestanding Dressers

Shell is constructed of 20-gauge steel with seamless back and top with reinforced corners. Heavy-duty steel ball-bearing drawer suspensions. Lock options: no-lock, "Top Drawer Only" lock which provides security to the top drawer via user supplied padlock, or double bitted/removable core key lock which locks all drawers (on steel drawer front units only). Painted with high-quality baking enamel.

Steel front dressers have drawer fronts of 20-gauge steel with integral pulls. Front painted to match the dresser case.

Wardrobes with woodgrain laminate front and top have 3/4" thick front and top constructed of particleboard core with high-pressure laminate surface. Edges of top and drawer front sides are banded with matching 3mm PVC for added durability. Bottom and top edges of drawer fronts are banded with 1mm matching PVC for a tight clean fit. Drawer pull is 8"W, 16-gauge steel waterfall design painted to match the pedestal shell. Grain direction on top is left to right, on drawer fronts is vertical.

Keyboard Tray

Mounts under hang-on worksurface to provide access and storage for computer keyboards. Molded black plastic surface with molded palm rest operates on steel ball-bearing telescopic suspensions.

CPU Sling

Mounts under hang-on worksurface to provide access and storage for CPU, freeing up worksurface space. Straps have positive locking clamps. Provides 5-1/2" of travel and 359° swivel. Accommodates CPU with maximum circumference of 65". Maximum weight capacity is 75-lbs. Available in black only.

Center Drawer

Mounts under hang-on worksurface or megasurface. Formed of molded plastic with compartment for pencils, paper clips etc. Non-locking. Operates on a formed suspension with ball bearing glides for smooth operation.

Pedestal and Freestanding Dresser Tops For Steel Front Units

Constructed of particleboard core with .030 face sheet and .028 backer sheet of high-pressure laminate. 3mm PVC edges for optimal durability. Tops are installed on pedestals or freestanding dressers in the field by use of factory applied double-sided tape.

Ladder

Composed of 14-gauge support bracket which hooks over top edge of the bed deck side rail and 14-gauge ladder assembly. Ladder assembly is constructed of 2 ea. 75"H seamless rectangular tubes with 5 ea. 3/4" x 1-1/2" obround seamless tubes which form the rungs. Rungs are inserted into the rectangular uprights and #10 threaded rod is inserted through the rung and drawn up from each end via black oxide stayfast allen head nuts. Ladder and support bracket is epoxy powder coated for maximum durability.

Bed Safety Bar

Constructed of 14-gauge steel plate which mounts to the inside of the bed deck side rail, and 1" o.d.- 14-gauge seamless steel tube which extends above the bed deck to provide additional safety for the sleep area. Epoxy powder coated for maximum durability.

Drafting Board

Drafting board is constructed of 5/8" high density particleboard with white melamine face and back, and white PVC edge banding. It is portable by use of padded folding handle and has rubber bumpers on the back to provide a non-marring and skid-proof stance. Steel folding legs on back provide for proper tilt angle. Unit sits on top of RoomScape® worksurfaces to create a surface suitable for drafting or design work.

Articulating Light

Light has 25" steel tubular arm with two gooseneck joints providing articulation for the 5-1/4" x 8-3/4" plastic head with 13 watt fluorescent bulb. Cord is 8" with ballast built into the plug on the end. Steel support bracket attaches to bed frame above or below the bed deck to allow most suitable positioning for the user.

Drop-leaf Surface

Attaches to standard hang-on worksurface to provide additional work space. Folds down when not in use. Worksurface construction same as hang-on worksurface. Attaches via full length steel piano hinge. Folding mechanism is heavy gauge steel spring loaded mechanism that self locks when drop-leaf surface is lifted to horizontal position. Release via pull on finger loop.
